

# ‘Open data’

Noordzeedagen

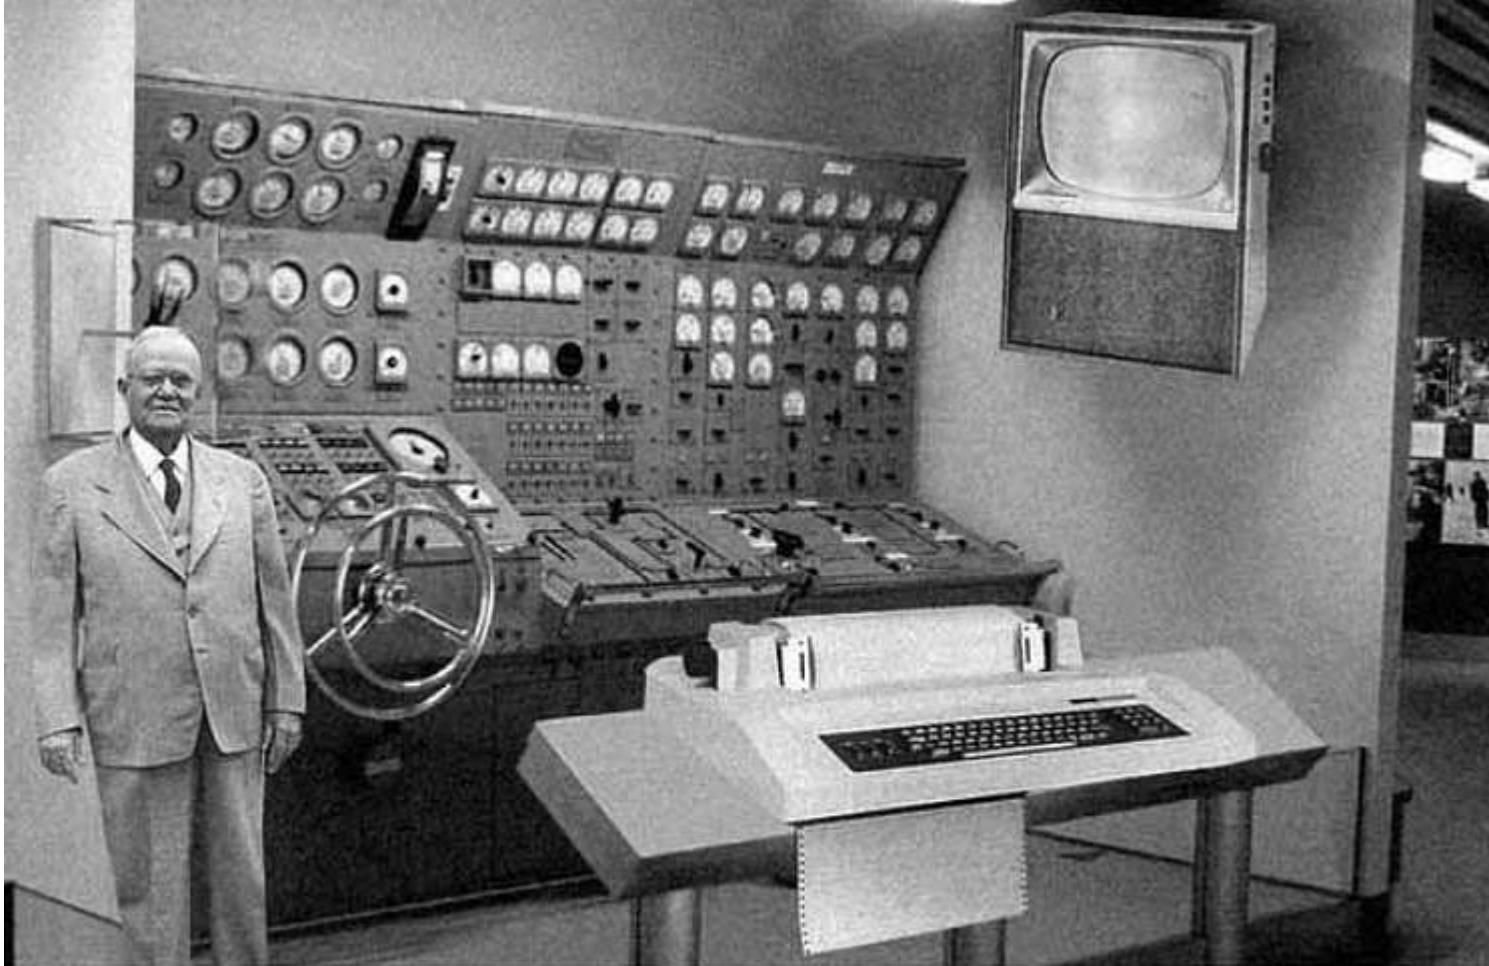

Gerard van der Kolff

2 oktober 2015

# Data growth and -storage, what's new?

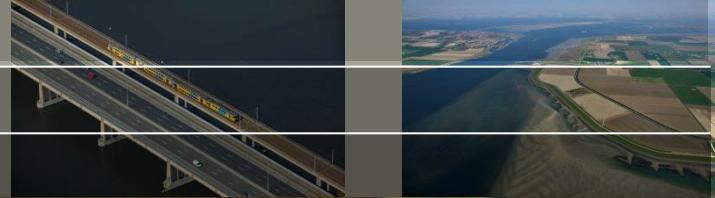

# Predicting the future is difficult...

Scientists from the RAND Corporation have created this model to illustrate how a "home computer" could look like in the year 2004. However the needed technology will not be economically feasible for the average home. Also the scientists readily admit that the computer will require not yet invented technology to actually work, but 50 years from now scientific progress is expected to solve these problems. With teletype interface and the Fortran language, the computer will be easy to use.

...and mostly fails.

# The Digital Disruption has already happened

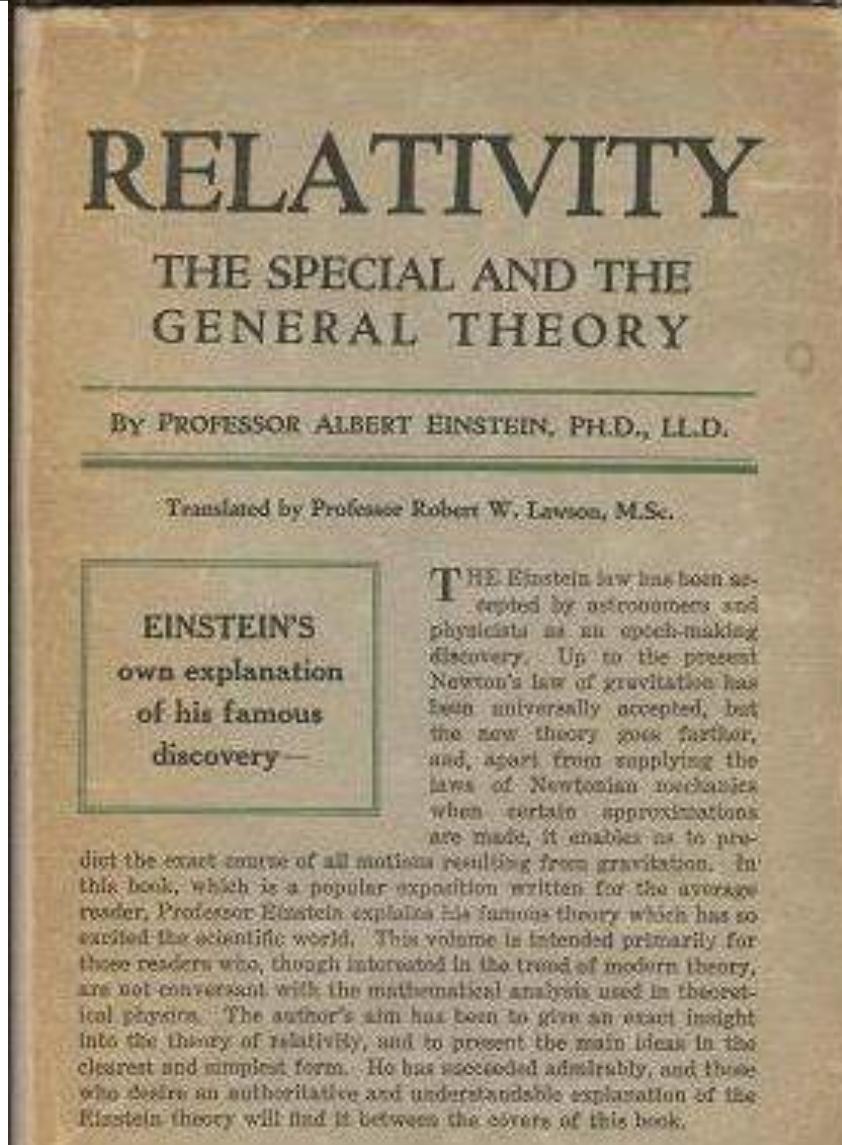

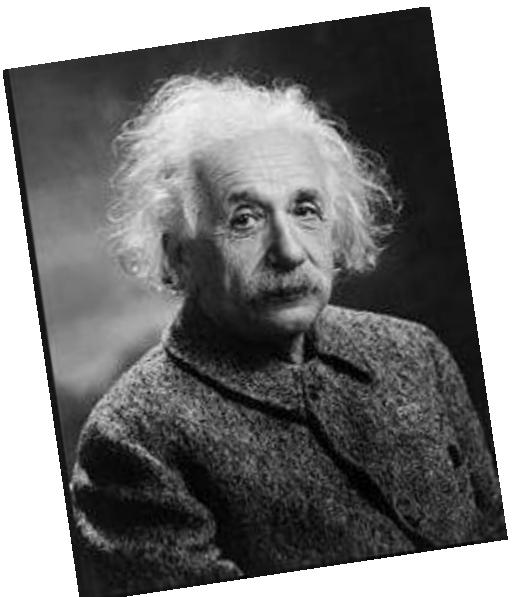

- Worlds largest taxi company owns no taxis ✓ Uber
- Largest accommodation provider owns no real estates ✓ Airbnb
- Largest phone companies own no telco infra ✓ Skype, WeChat
- Worlds most valuable retailer has no inventory ✓ Alibaba
- Most popular media owner creates no content ✓ Facebook
  
- Worlds largest movie house owns no cinemas ✓ Netflix
- Largest software vendors don't write the apps ✓ Apple & Google

# Goals for the Short term and Middle term

- i. Reduce amount of active data
- ii. Start with data management  
(ICT, models and users)
- iii. Teach and inform people about data management
- iv. Investigate data reduction models
- v. Make the right tooling available
- vi. Start with a Cloud strategy
- vii. Start with grabbing chances and possibilities (Big) Data-analyses

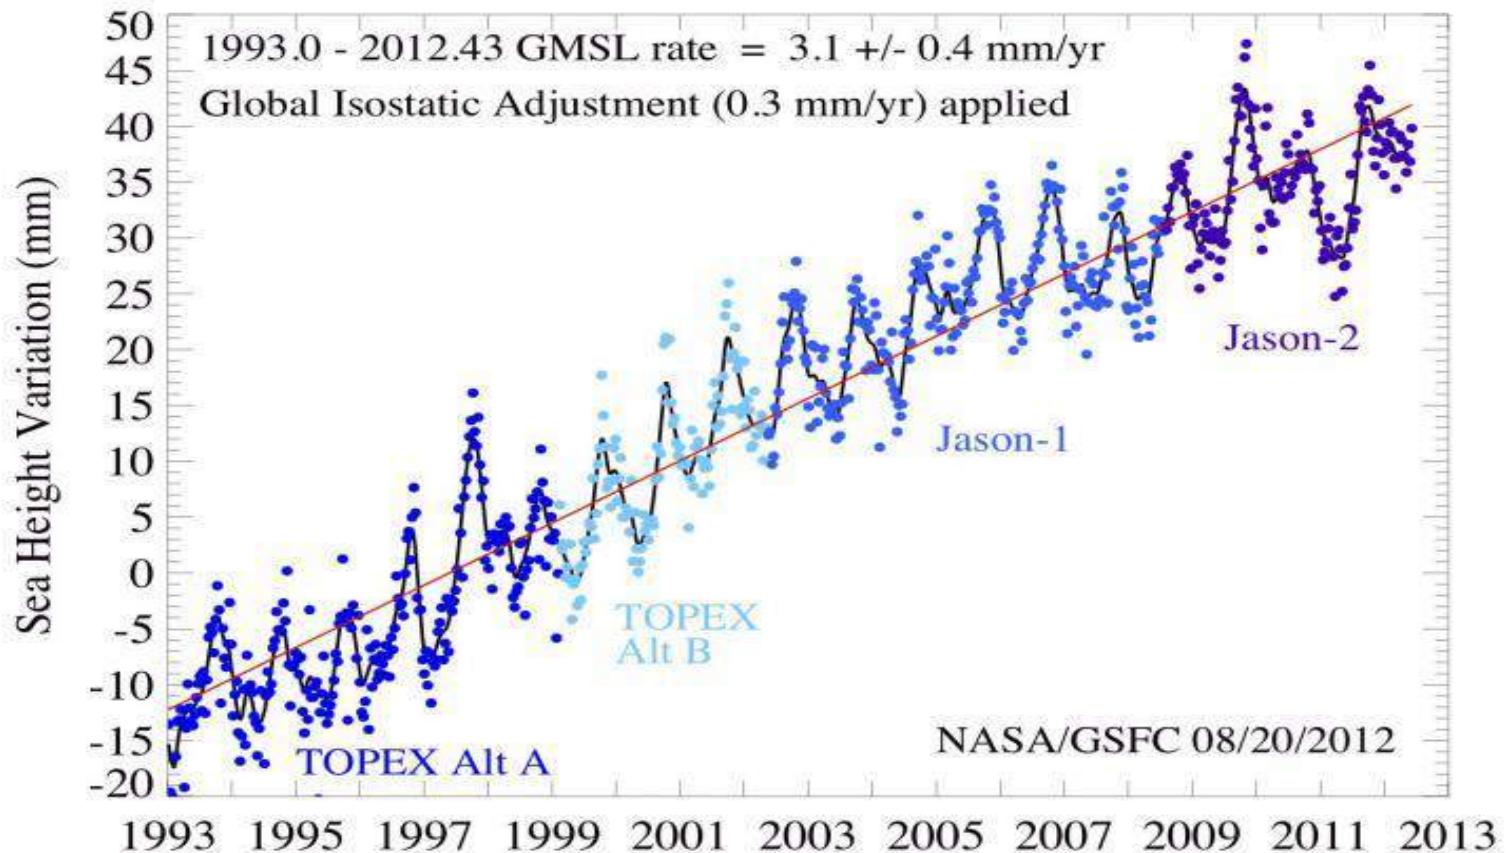

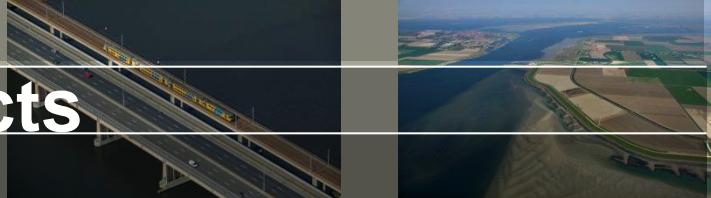

# From one-man show...

# Ecological effects in the Voordelta

- extension occurs in the Voordelta, a protected area (Natura 2000)
- European & national legislation require compensation of the significant effects on nature
  - Loss of 2455 ha marine habitat ("Habitat type 1110" Sandbanks which are slightly covered by sea water all the time)
  - Loss of foraging area for protected bird species (Common scoter, Common tern, Sandwich tern)

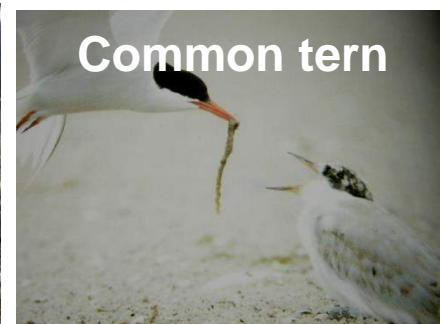

Habitat 1110

Common scoter

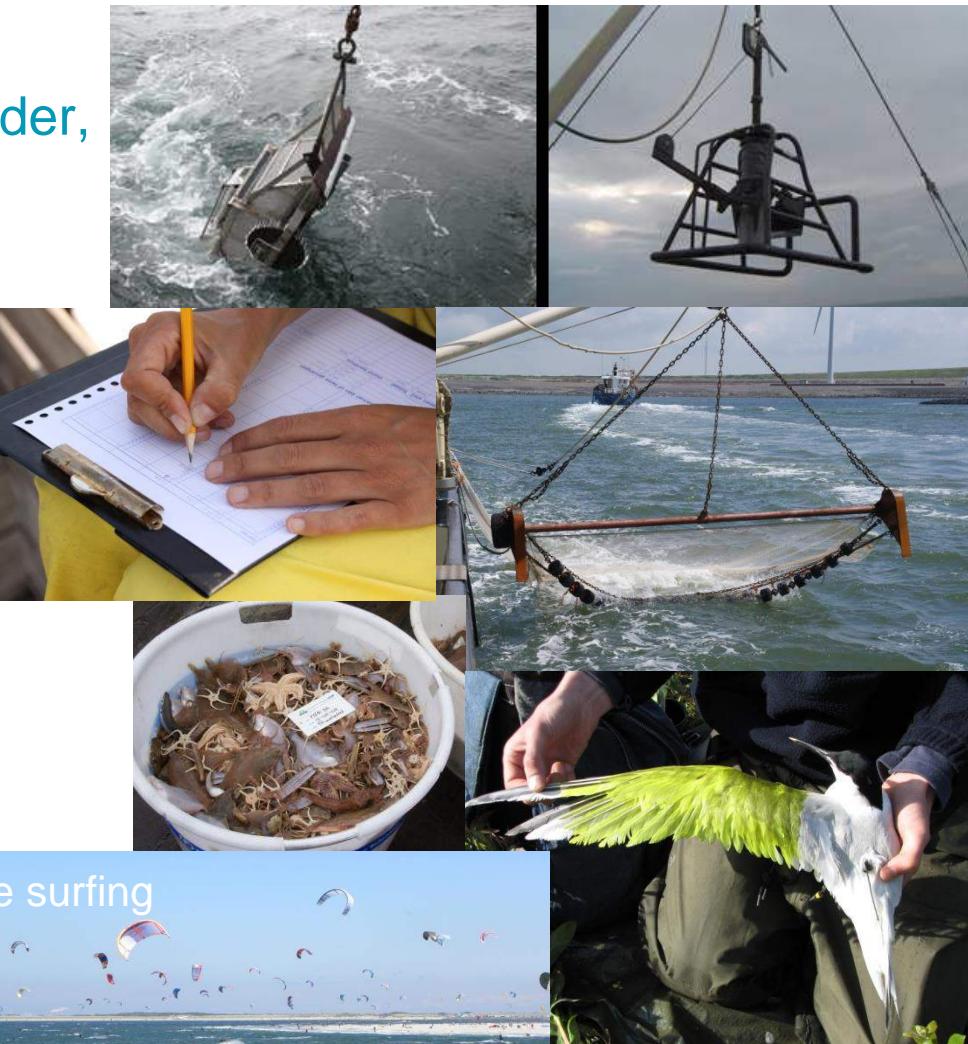

Sandwich tern

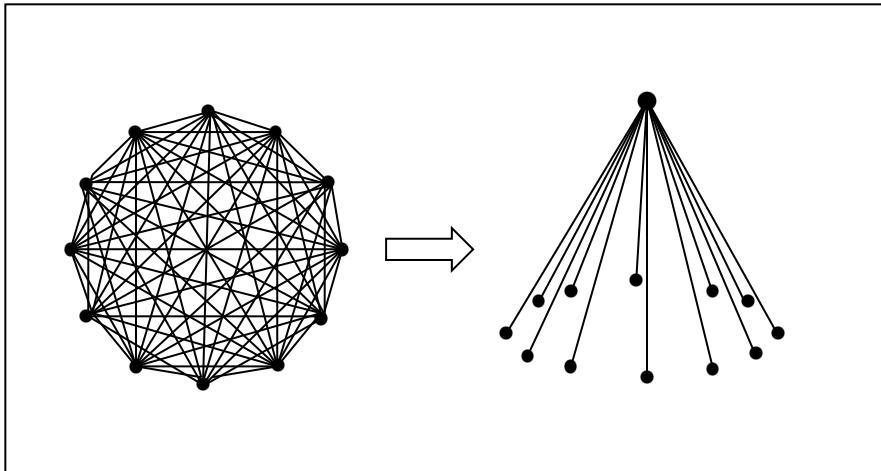

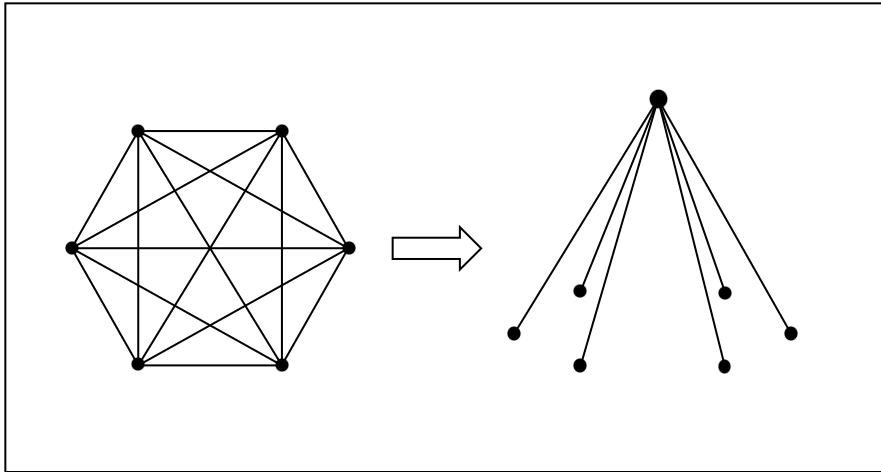

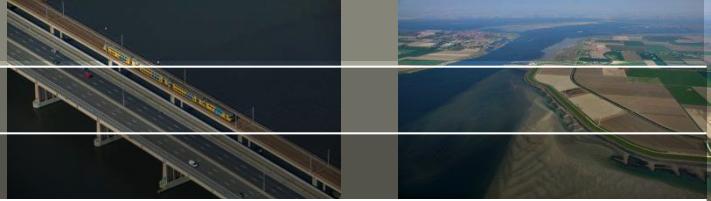

Common tern

# Extensive monitoring programme 2009-2013

- Client: Rijkswaterstaat for PoR
- Deltares: Independent projectleader, integration of results, data management
- Consortium (led by IMARES): monitoring, data analysis
- Benthos (IMARES/NIOZ)
- Fish (IMARES)
- Birds (Waardenburg, INBO)
- Abiotic conditions (Arcadis/Alkyon)
- Human activities (CSO)

2 oktober 2015

The screenshot shows a web-based map viewer interface in Firefox. The left sidebar contains a 'Layers' tree view with several categories and sub-categories, many of which have checkboxes next to them. A large red polygonal shape is overlaid on a map of the North Sea coast, extending from the British Isles through the Netherlands and Germany. A smaller pink polygonal shape is also visible further north. The map includes labels for cities like Lynn, Norwich, Lowestoft, Ipswich, Colchester, Thetford, Alkmaar, Den Helder, Leeuwarden, Groningen, Delfzijl, Emden, Norden, Wilhelmshaven, Cuxhaven, and Hamburg. The Wadden Sea is labeled. The bottom of the map shows the Dutch coastline with towns like Middelburg, Goes, Breda, Tilburg, and 's-Hertogenbosch. A legend at the bottom right indicates 'Project NAVTEQ © 2014 Microsoft Corporation'. The bottom status bar shows coordinates X: 685485.991 Y: 6970321.666 and the date 2 oktober 2015.

Meest bekeken de Nieuwe Kaart van Nederland Actueel Hoogtebestand Nederland 2 0,5 meter maaiveldraster, opgevuld (AHN2) BRT achtergrondkaart WMTS Kadastrale Percelen

This screenshot shows the homepage of the National Georegister (NGR) website. At the top, there's a header bar with links for Home, Actueel, Catalogus (which is currently selected), PDOK, Over NGR, and Voor ontwikkelaars. Below this is a search bar with a placeholder 'Met als resultaat:' and checkboxes for 'Online kaarten', 'Downloadbare data', and 'Data op aanvraag'. A 'Toon uitgebreide zoekcriteria' button is also present. The main content area features a section titled 'Laatst in het NGR toegevoegde of aangepaste metadata' with four cards: 'Geschiktheid Warmte Koude Opslag diep' (with an image of a map showing red and grey areas), 'GeoTOP - gefundeerde geulenkaart' (with an image of a map showing green, yellow, and blue regions), 'GeoTOP - lagenmodel 14 Stroombaan generatie CFormatie van Echteld' (with an image of a map showing blue and green areas), and 'GeoTOP - geologische kaarten' (with an image of a map showing various geological layers). Below this are two sections: 'Meest bekeken' (with cards for 'de Nieuwe Kaart van Nederland', 'Actueel Hoogtebestand Nederland 2 0,5 meter maaiveldraster, opgevuld (AHN2)', 'BRT achtergrondkaart WMTS', and 'Kadastrale Percelen') and 'water(4757)' (with an image of a map showing a network of blue lines representing water bodies). On the left side, there's a sidebar with a list of search terms and their counts.

# KNMI Data Centre

KNMI Data Centre

Home > Results

The KNMI Data Centre offers a wide range of climate data (metadata), including assimilated ozone profiles, average daily temperatures, cloud cover, and daily evaporation rates.

In case you can't find what you're looking for, please contact the KNMI implementation team.
